Title

Target distribution $\pi(C) \propto \exp[\beta(\mu N - E(C))]$

Using a Metropolis-Hastings scheme with uniform proposal over sites:

Title

Target distribution $\pi(C) \propto \exp[\beta(\mu N - E(C))]$

Using a Metropolis-Hastings scheme with uniform proposal over sites:

- Insertion proposal: choose one empty site uniformly and attempt $(N \to N+1)$

$$p_{\text{ins}} = \min\left(1,\ e^{\beta\mu}\,\frac{V-N}{N+1}\right)$$

Title

Target distribution $\pi(C) \propto \exp[\beta(\mu N - E(C))]$

Using a Metropolis-Hastings scheme with uniform proposal over sites:

- Insertion proposal: choose one empty site uniformly and attempt $(N \to N+1)$

$$p_{\text{ins}} = \min\left(1,\ e^{\beta\mu}\,\frac{V-N}{N+1}\right)$$

- Deletion proposal: choose one occupied site uniformly and attempt $(N \to N-1)$

$$p_{\text{del}} = \min\left(1,\ e^{-\beta\mu}\,\frac{N}{V-N+1}\right)$$
